

The referenced petition by SAVI Technology is a classic example of how not to innovate; first create a product, whose use is prohibited by current regulations, then ask for relief from those regulations on the grounds that the product cannot succeed under them. If SAVI were to demonstrate that they could not create a viable RFID tag under current regulations, relief might be justified. They have not done so; they have instead designed a product that they know will not work and complained about that fact. They should go back to their drawing boards and find a way to work within the regulations.
